Dear Sir or Madam:

I have over the past several years, contracted Eastern Mechanical to perform various welding and mechanical services or installations. Our requirements involve high temperature (~1200 Degrees F) process piping ranging from 1 to 6 inches. The materials are stainless steel and incolloy. Typically the jobs involve roof and wall penetrations, component positioning, and fairly precise alignment of piping in three dimensions.

In every case, I have found Eastern Mechanical to be knowledgeable, meticulous, professional, and complete.

There have been instances where Eastern Mechanical was not the lowest bidder on a contract, but was still awarded the job based on the need for the project to be completed on time and properly. I highly recommend them.

Sincerely,

Konrad Miller
Test Facility Supervisor
